

Enrollment Flow Monitor

The Ultimate Intune Intelligence Platform.

Diagnose failures, track compliance, and roll out endpoints with absolute confidence.

Endpoint Management Shouldn't Require Guesswork

Blind Deployments

Launching Autopilot or ADE without knowing if hardware hashes or licenses are actually assigned.

Cryptic Hex Errors

Losing hours parsing through undocumented Microsoft error codes sent via blurry user screenshots.

User user screenshot:

Error: 0x80070002 - File Not Found. See logs.

Error code: 0x80070002

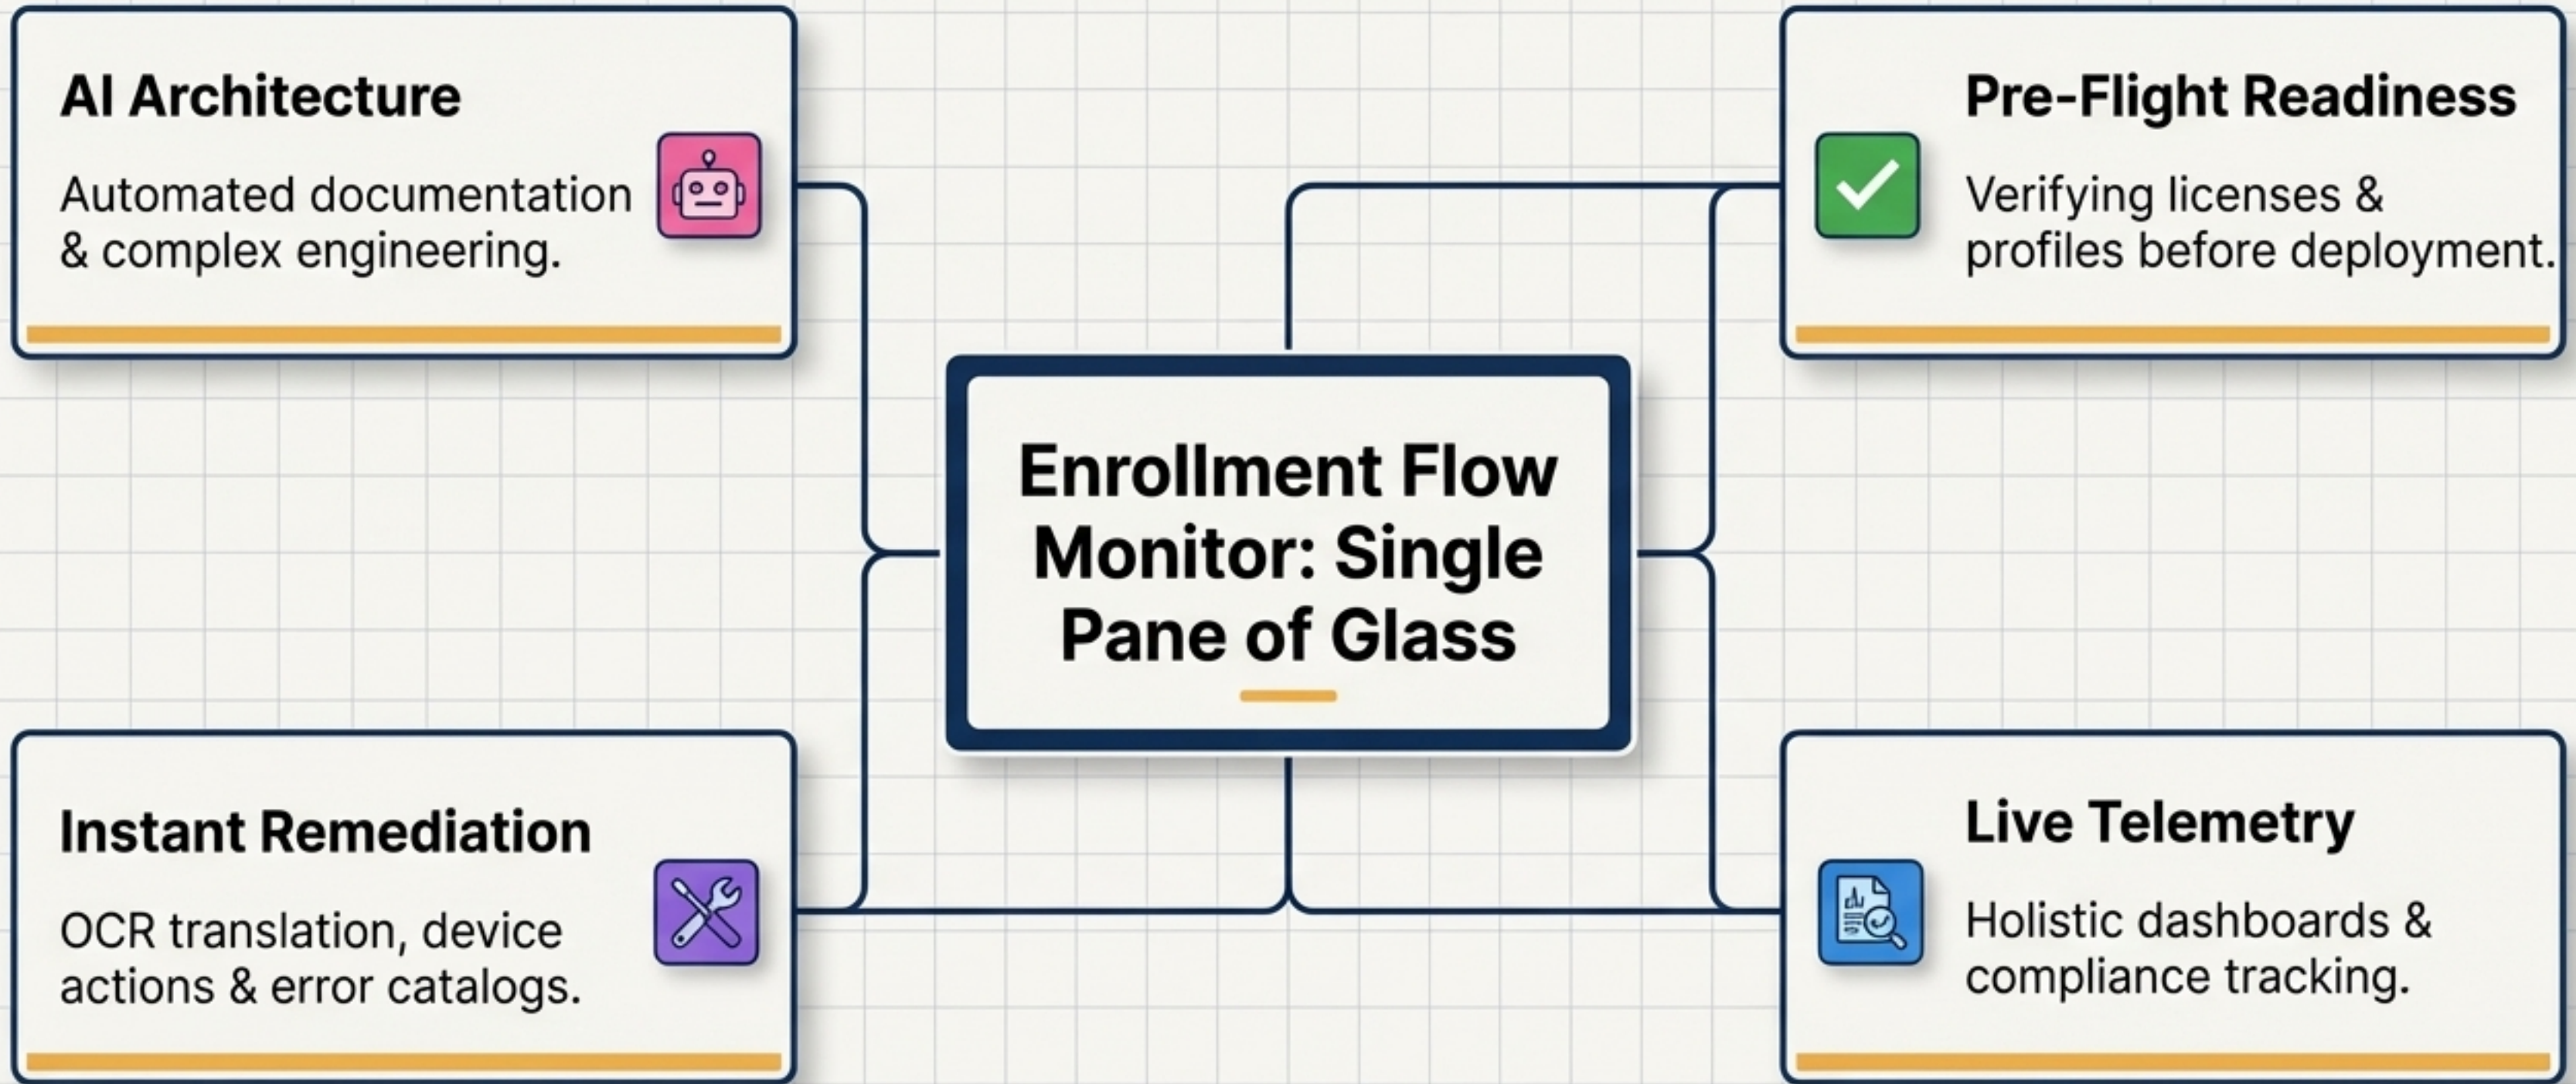

Scattered Telemetry

Digging through multiple M365 and Intune portals just to get a basic compliance health score.

When Intune enrollments fail, IT teams lose hours to troubleshooting, log parsing, and forum hunting. It's time for a unified approach.

Your Intune Command Center

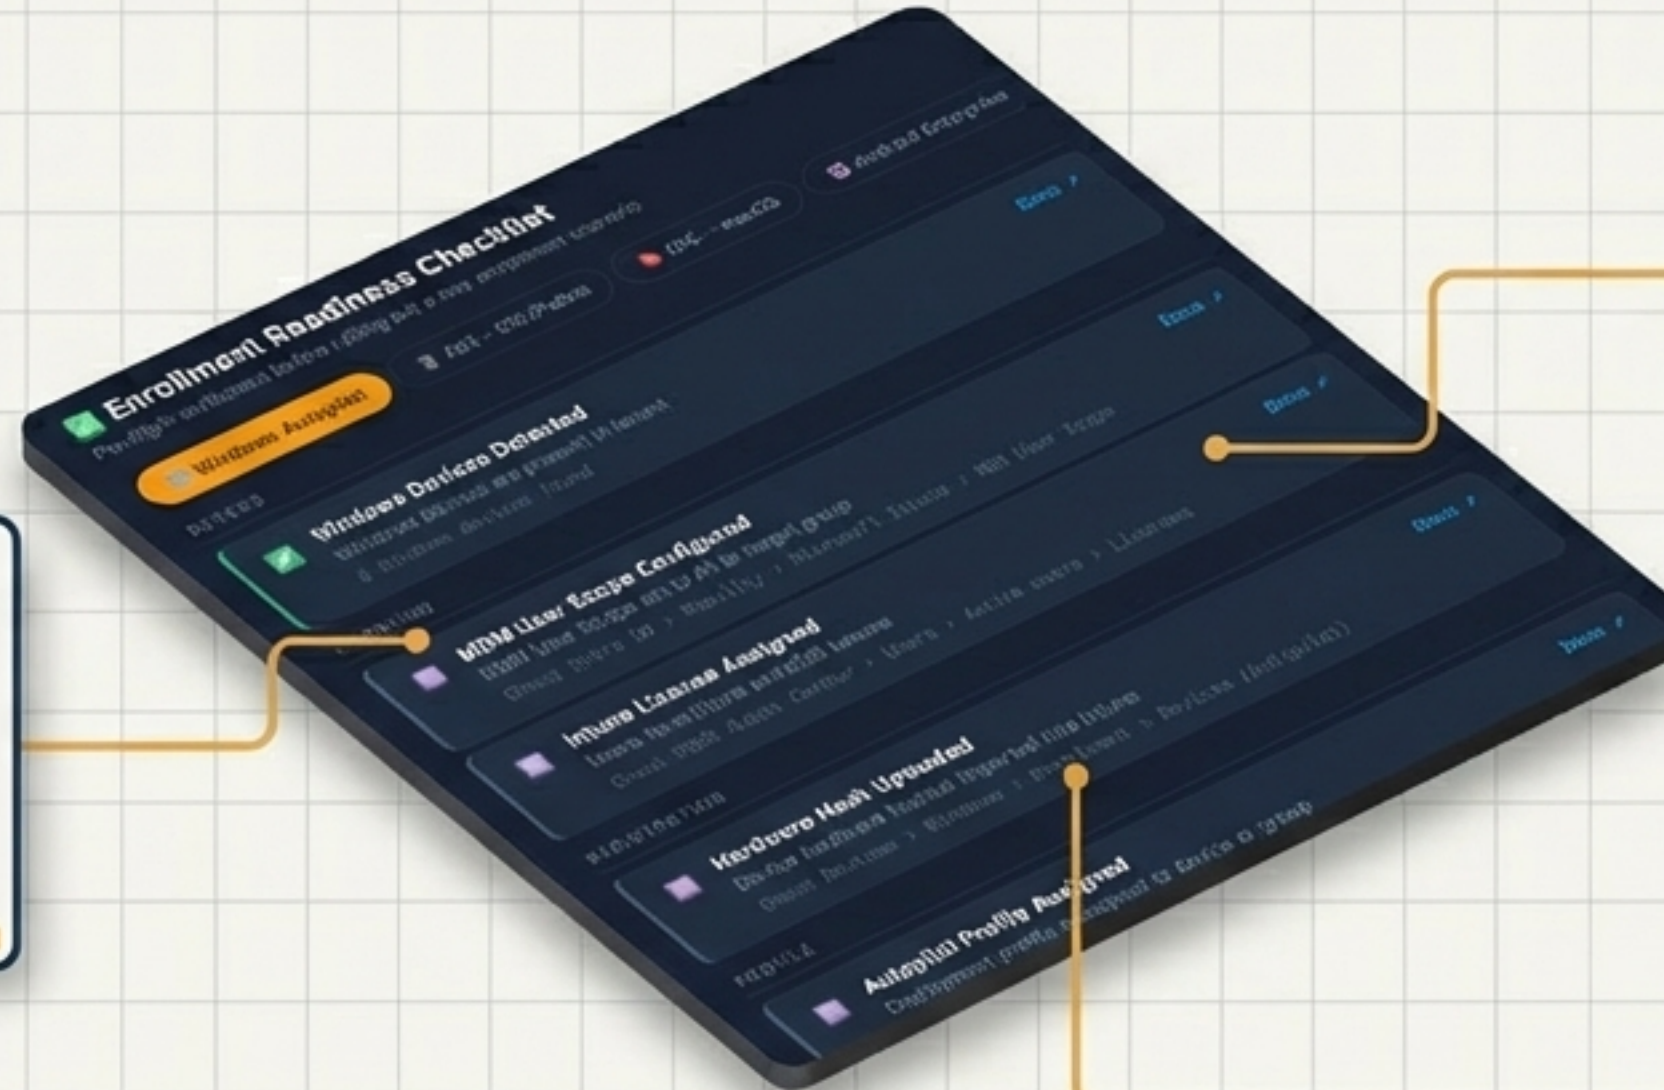

Phase 1: Deploy with Zero Surprises

Pre-flight verification for Autopilot, ADE, and Android Enterprise.

Verify Entra ID Settings

Ensure MDM User Scope is correctly set to 'All' or your target group.

Prevent License Blocks

Confirm targeted users actually hold valid M365/Intune licenses before deployment starts.

Validate Autopilot Registration

Instantly check if device hardware hashes are successfully imported.

Phase 2: Total Visibility Across Every Platform

Stop portal-hopping. Get live, holistic telemetry on every device and compliance state instantly.

Non-compliant 3 (30%)

3/10 30%

Stale Sync (>7 days) 2 (20%)

2/10 20%

Phase 3: Actionable Control at Your Fingertips

The dashboard shows a table of devices with columns: ID, DEVICE NAME, OPERATING SYSTEM, OS VERSION, and COMPLIANCE STATE. One device is selected. A modal titled 'Sync 1 Devices' is open, asking 'Force policy sync on 1 devices?' with 'Cancel' and 'Confirm Sync' buttons.

ID	DEVICE NAME	OPERATING SYSTEM	OS VERSION	COMPLIANCE STATE
26291663-666d-4867-...	GPC-keren-ALVNM	Windows	10.0.26200.8097	COMPLIANT
eaefc3c3-5652-4211-...	lis-srv-devops	Windows		
6cad44c7-8477-778a-...	BG-DABAN-AAT	Windows		
c4562289-417c-4848-...	GPC-talys-OAMMV	Windows		
75166738-a3d6-4734-...	vm-porox-y-prowl	Windows		
2ace63bb-bf23-95f5-...	YAACOV-MEYER	Windows		

Immediate Execution: Force policy syncs or device wipes directly from the dashboard.

The 'Advanced Graph Query' interface allows running Microsoft Graph API queries. It shows a query: `users?$top=10&select=displayName,userPrincipalName,account` and a 'Run' button. The response is displayed in a scrollable area.

Advanced Graph Query
Run Microsoft Graph API queries directly against your tenant

BET `https://graph.microsoft.com/v1.0/`

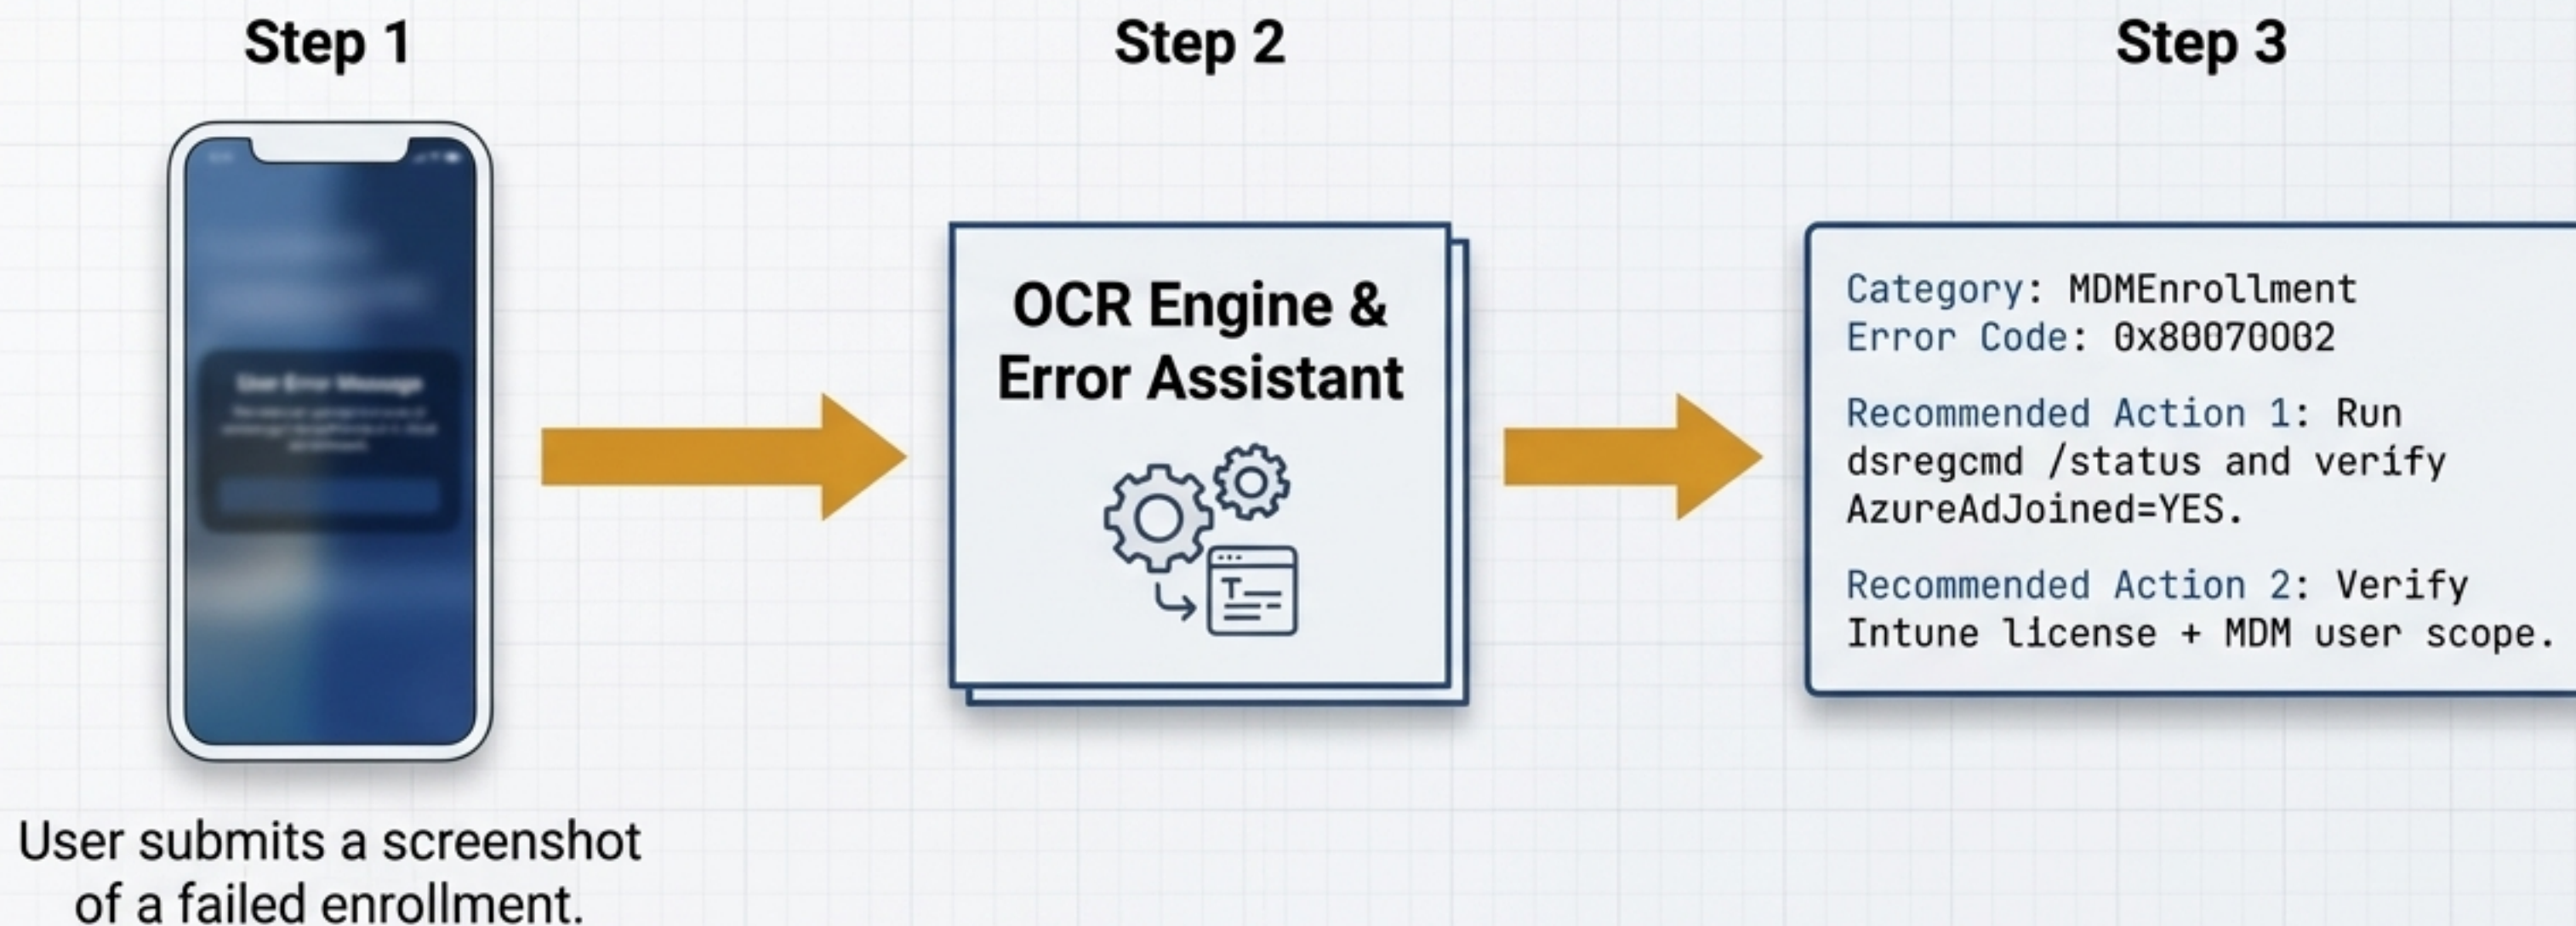

`users?$top=10&select=displayName,userPrincipalName,account` **Run**

RESPONSE **Copy**

```
{
  "@odata.context": "https://graph.microsoft.com/v1.0/$metadata#users(displayName,userPrincipalName,accountEnabled)",
  "@odata.nextLink": "https://graph.microsoft.com/v1.0/users?$top=10&select=displayName,userPrincipalName,accountEnabled$skiptoken=RFHwDAI...AAQAAABIGYRRHMM.IAHxY1LK8vYySjb2BpVANLc281RDhSNdyuzC1jNzFwLTOS00gtYjEAK1B100hJZDRSNJE30DeSAAAAAAAAAAAAAA",
  "value": [
    {
      "displayName": "Test",
      "userPrincipalName": "test@contoso.com",
      "accountEnabled": true
    }
  ]
}
```

Advanced Diagnostics: Run custom Microsoft Graph API queries against your tenant without leaving the platform.

The Killer Feature: Instant Error Translation

Turn frustrating user screenshots into actionable Tier 3 remediation guidance in seconds.

The Ultimate Intune Error Catalog

Stop Googling obscure Microsoft hex codes.

53+ Known Errors:

Sourced directly from Microsoft Docs and matched to your tenant.

Automated Incident Tracking:

The platform maps active failed installs to these documented remediation steps in real-time.

```
{
  "id": "none",
  "signature": "none",
  "appId": "",
  "appName": "",
  "normalized": "",
  "errorcode": "0x80180014",
  "firstSeen": "2023-08-01T00:00:00.0000000",
  "lastSeen": "2023-08-01T00:00:00.0000000",
  "severity": "High",
  "isPlaceholder": false,
  "summary": "MDM enrollment not allowed",
  "matched incidents": 1,
  "the selected": ""
}
```

Enrollment Error Catalog
Known Intune & enrollment errors with remediation steps — sourced from Microsoft Docs

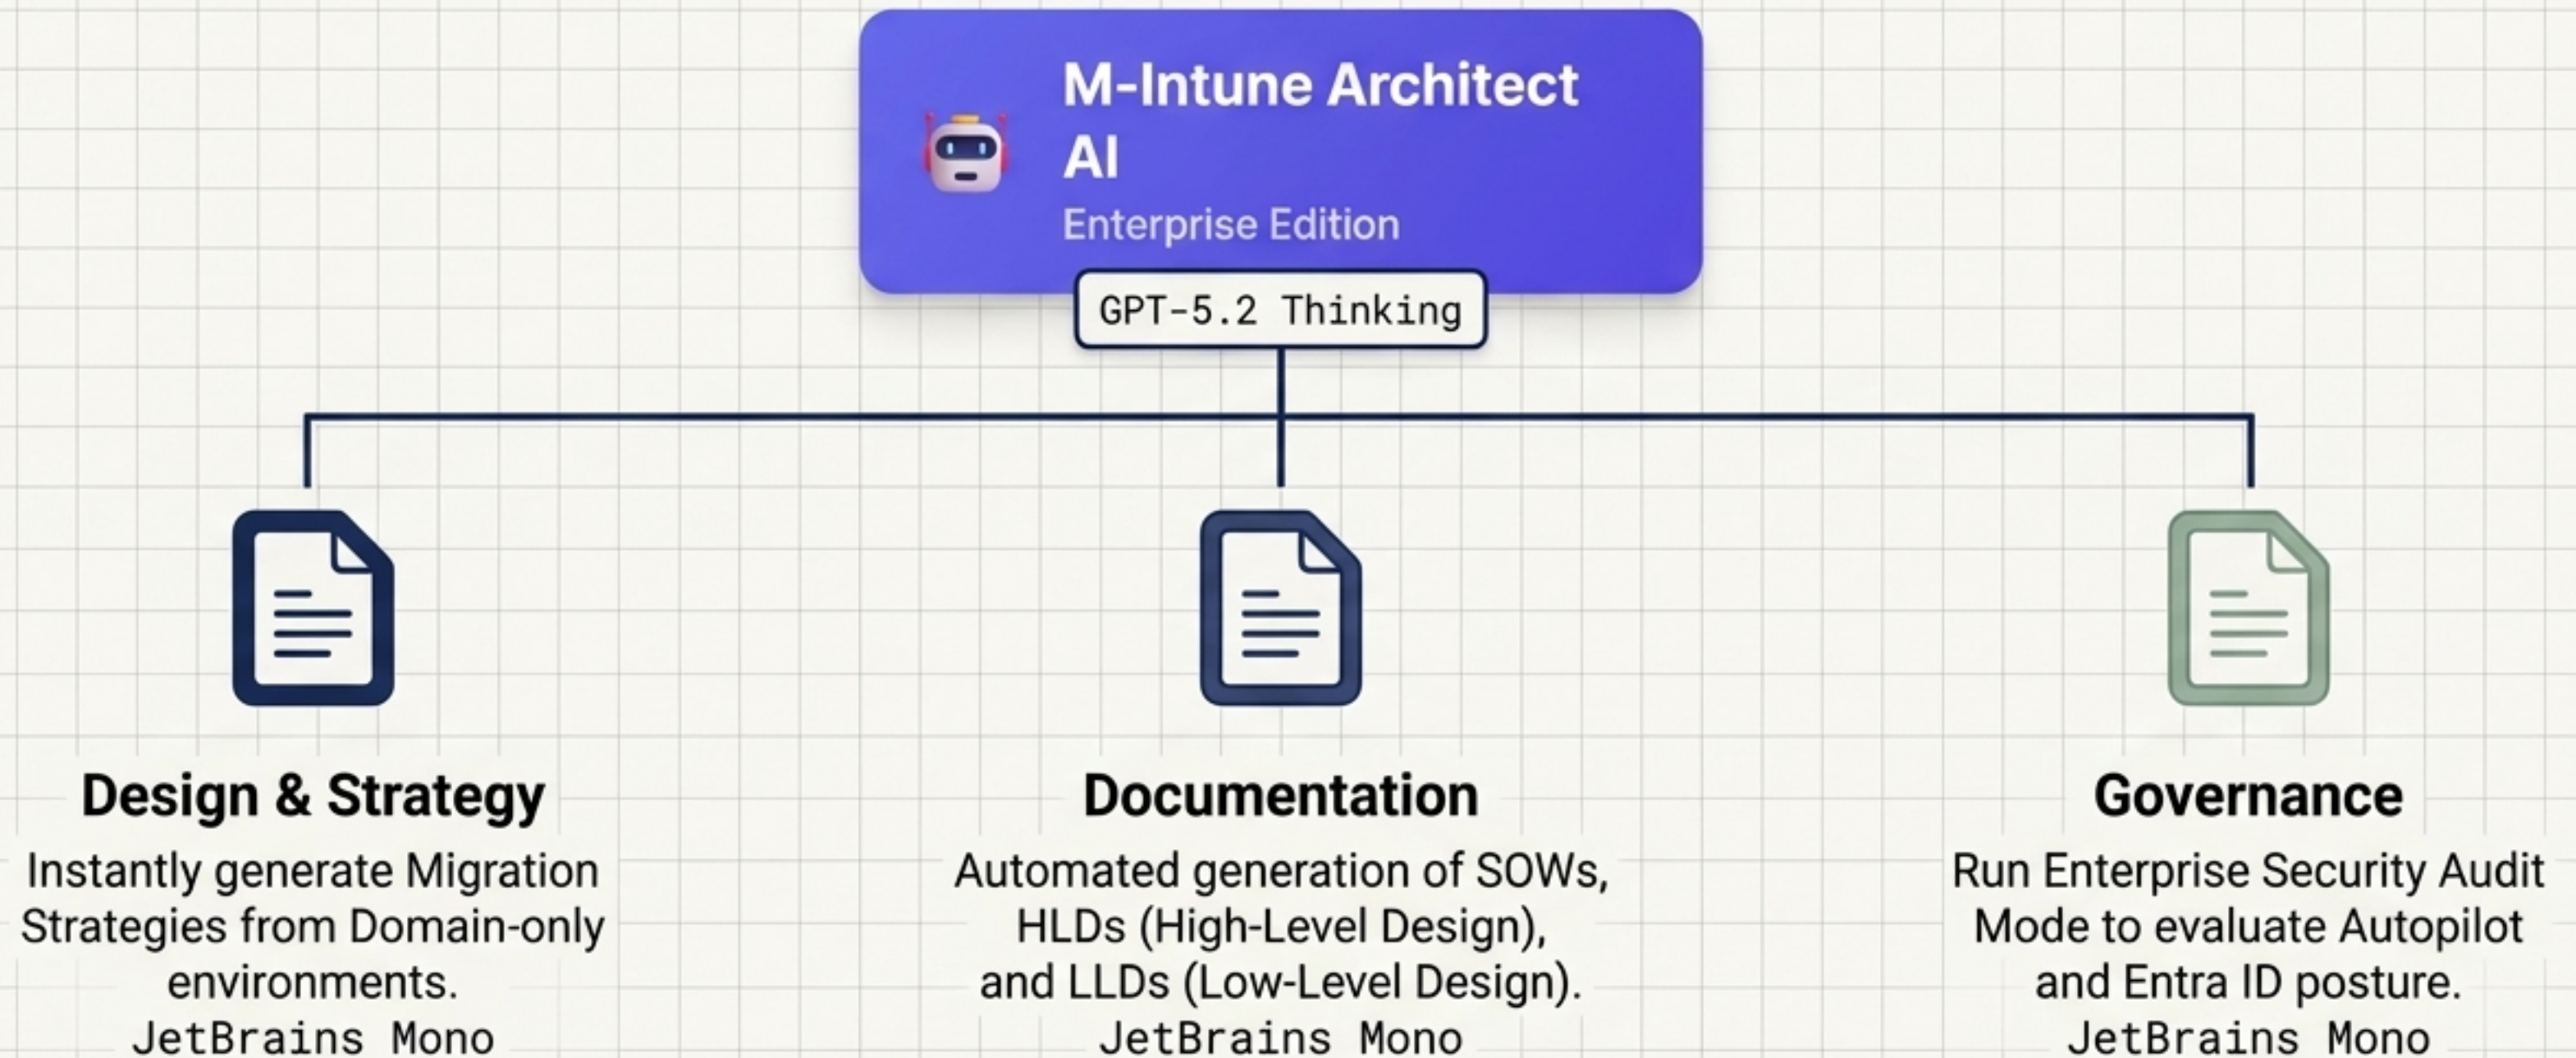

Search by code, title or description..

all high medium low Windows iOS Android macOS

53 errors found

HIGH	0x80180014	MDM enrollment not allowed	Windows iOS Android
HIGH	6x80070774	Autopilot profile not assigned	Windows
MEDIUM	80180003	Terms of Use not accepted	Windows iOS Android macOS

Phase 4: Scale Your Architecture with AI

Your dedicated, integrated Enterprise Systems Engineer.

The ROI of Clarity: Reactive vs. Proactive

Category	The Old Way	Modern Endpoint
Pre-Deployment	"Hope & Pray" – relying on manual checks and assumption.	Automated Pre-flight Readiness Checklists.
Troubleshooting	Hunting through Reddit and forums for cryptic hex codes.	AI OCR Translation and a built-in 53+ Error Catalog.
Data Access	Multi-portal clicking across Intune and M365 Admin Centers.	Unified dashboards with embedded Advanced Graph API Queries.
Architecture	Dozens of hours drafting manual Low-Level Design documentation.	M-Intune AI Architect generates HLD/LLDs in seconds.

Enterprise-Grade Security & Governance

Secure by design. Your tenant data never leaves your control.

Delegated Permissions:

Operates strictly via Microsoft Graph API delegated permissions.

Admin Consent Required:

Cannot be installed or run without explicit Enterprise Admin consent in Entra ID.

Zero Footprint:

Read-centric analytics designed to protect your configuration state.

Configured scopes:

```
openid profile offline_access
DeviceManagementServiceConfig.Read.All
DeviceManagementManagedDevices.Read.All
DeviceManagementApps.Read.All
Directory.Read.All
```

Recommended (Intune enrollment + app status):

```
DeviceManagementManagedDevices.Read.All
DeviceManagementApps.Read.All
DeviceManagementServiceConfig.Read.All
Directory.Read.All
```

Remember: delegated permissions require admin consent in Entra ID.

Stop Fighting Intune. Start Orchestrating It.

1.

Diagnose Failures
Instantly.

2.

Track Global
Compliance.

3.

Architect at Scale.
